The same as any other new job, you start by figuring out the hierarchy, who to contact and what to ask. You even find yourself googling terms such as "the chain of command in an organization", "best practices", etc. However, what do you find when you search for such terms? The answer to that question? It's not something that has to be an issue, it's a natural process that should be adopted by any organization and each worker should take part in it as much as they can. After all, there are millions of companies in the world and every single one of them has a hierarchy. Why should you not have one too? In fact, hierarchy can turn out to be a positive thing, as long as it is done right and goes into the right direction. Here's how 1. The boss knows who's on top, that's it Every hierarchy can only be as good as the person in charge. The first thing a hierarchy should do is to identify who is going to be on top. Whether it is a board or the CEO, this is a person who is going to lead this organization and it should know everything about the way of running things. Unfortunately, there are several companies who haven't identified this person in charge and everything will be carried on by the rest of the workers who are not that close to him. 2. You're not as important as you think There are a lot of stories out there that our heroes never stop working until the day they get fired, but the reality is different. The truth is that, while there are a lot of companies out there who actually do work for their employees and everyone is important, most of them don't. There are countless employees who are not as important as they think they are, but are going to be working their entire lives without ever getting promoted. Some companies have a promotion process that goes as follows: 1. Person who is being promoted talks to the boss and asks for the

KEYMACRO is a keyboard macro software created by Keymacs for Windows, Windows Phone and Mac OS X platforms. It allows you to program keyboard shortcuts for apps that you use most frequently and can save them on a customizable key combination list. Why you'd want one: KEYMACRO is helpful for those of us who tend to utilize the same apps on a regular basis. This program allows you to easily assign a keyboard shortcut that you can call upon to launch one of the apps that you use on a daily basis, without even having to perform a process of launching the program and typing the shortcut manually. For example, let's say you're a heavy Facebook user and you find the fact that you have to go into the Facebook app on your iPhone, launch the app, type in your password, and press the 'Login' button quite a hassle. If you want to login to Facebook on your iPhone on a regular basis (say, every night before you go to sleep), then you may find yourself constantly using the Keymacro function on your phone. Aside from that, though, we're big fans of Keymacro for the Mac. We use it all the time, and have taken to memorizing

shortcuts for a variety of apps (including Evernote, Thunderbird, Tweetbot, Skype, Mail, Safari and many more). Mac OS X users can also use the function for custom applications, whether they're built in or outside of the platform. We're sure that there are probably a number of apps that you use on a regular basis that require a certain combination of keys to be pressed. The only way that you can get at this is by using the Keymacro function. Let's say that you're a big Photoshop user, and you need to use the shortcut to access the Copy/Paste function in the program. We'd advise that you set up the Keyboard Shortcuts function within the program itself. If you leave it up to the user to set up the shortcut keys, chances are that you'll set it up wrong, or you'll forget one of the keys, making it quite useless. KEYMACRO allows you to choose which type of shortcuts you want to use, and you can save them in a file, which you can then load whenever you need it. The program also features its own keyboard and mouse configuration utility, so 1d6a3396d6
