KEYMACRO is a very popular tool for Microsoft Excel users, with over 700,000 registered users (according to the manufacturer). It's available as a standalone application and comes in a variety of editions, each one equipped with special tools and features. To be honest, though, the first thing that usually catches your eye is the price. But we promise you that you won't regret spending money on it, especially if you need the best product for recovering lost passwords in Excel files. KEYMACRO Demo: When you open the KEYMACRO trial version you're greeted with a couple of menu items, like "Tools", "Keys", "Key calculator" and "Generator". If you pick the last one, you'll be presented with a 10-key calculator, which is the most important tool for the job. This is the tool you're looking for – it generates a huge list of words that are stored as a text file (by default it's saved in a TXT format file), so you just need to specify the name of the file and open the document, which is protected with the key, by clicking the associated button. Obviously, if you know what the key is, you can type it in by hand. But if you don't, then there are a few options available. You can choose between a word list (in which case all the words will be processed together, which is not recommended) or a list separated by character types (in which case each separate word will be processed separately). You can also choose to process the words case-insensitively or case-sensitively. Finally, there's also a method called "Hashing" that uses a password and converts it to a unique key that represents the input. This is the only option that requires a pre-defined password. TRANSPORT DEMO: The TransPort demo can be downloaded for free and is certainly the best tool for its kind. It's a real heavyweight application, with many features available, all of them easily accessible through a visual interface. You can load a file containing protected documents, enter a protected document name, a user name and password. Then it's just a matter of clicking one button to get the open password. While some other applications can only offer a few options, this one gives you unlimited features. Just scroll the 1d6a3396d6
