i have the for windows version 3.0.1.01 which worked for me. but i would recommend you download the for windows version 3.01. i am using a cto 630 and all it seems to do is tell me it couldn't find some files. my first thought was that it was corrupt because the file that has the cto firmware in it is a bit large. i did a fresh install of the for windows version 3.01 and it installed just fine. if you decide to download the for windows version 3.01 and it doesn't work, try downloading the for windows version 3.02 and running that. it may have something to do with how easy it is to break into my computer. i was surfing the web when i got the message. just thought i would let you know that i have attempted to unistall this software and it only tells me that it is succesful, but still runs in the background. my system is running windows vista. i agree with the comments above about the quickstart guide and the graphic. i think the quickstart guide should be a prerequisite for using the software. i was unable to find an "uninstall" button on the scal software. i called the technical support number and they said that i need to call my manufacturer to get an uninstall code. so i did. i got the code. i typed it in the web site. it told me that it was ok. then i tried to open the software. it was still running in the background, just like it said it would. i uninstalled it and tried it again. it still was running in the background, just like it said it would. how do i uninstall this program. i have been trying for 3 days. do you know if there is a way to uninstall this software? this is the third time i've tried to uninstall it. the tech support guys told me that i needed to uninstall it first. it is running in the background, just like they said it would. i tried to uninstall it 3 times. the uninstall button does nothing when i click on it. i tried uninstalling it twice through the add or remove programs, and once through the control panel. i tried to uninstall it through the control panel, but it told me that the software is running.
